JORAN hexapod size has been adapted to the beam height of the Australian Synchrotron.

JORAN actuators at LBL are longer to enable  $a \pm 12.5^{\circ}$  rotation around Z. This JORAN hexapod has also been customized to support a 3.2 tons payload.

Customized JORAN hexapods with extra Rz rotations calibrate the segments of the primary mirror of ESO ELT telescope at Safran REOSC.

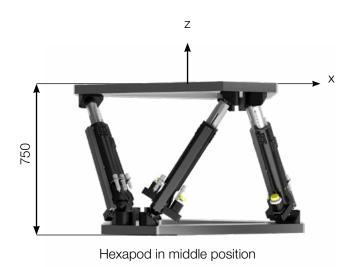

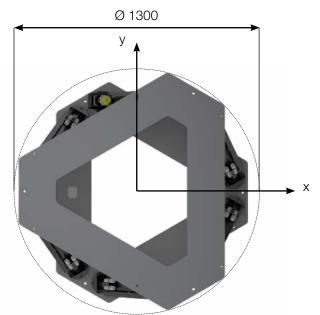

JORAN hexapod has been developed in collaboration with ESRF synchrotron to position mirrors with very high resolution.
